

Clinical Research
(Community & Hospital-Based Trials)

Taking research closer to people

Vanguard 
Life Sciences

Deployable clinical research environments designed around participants, protocols and real-world access

Clinical research today demands speed, accessibility and consistent execution across hospitals, community locations and regional sites. Whether supporting early-phase studies, decentralised models or hospital-based visits, research teams need controlled environments that deploy rapidly, operate professionally and protect the integrity of every sample and interaction.

Vanguard Life Sciences delivers mobile and modular clinical research facilities that integrate smoothly into hospital estates and community settings. Designed for participant comfort, operational efficiency and regulatory confidence, our environments enable research teams to work closer to the populations they serve without compromising quality or compliance.

Bring research to the people, safely, efficiently and at speed

Participant-ready clinical spaces engineered for comfort, compliance and rapid deployment.

Enabling smoother trials and broader access

Clinical trials succeed when participants can access research easily and clinical teams can operate efficiently within controlled, compliant environments. Vanguard Life Sciences removes common barriers by deploying validated, patient-centred spaces directly where research is needed.

Why clinical research organisations and hospital teams choose Vanguard

Rapid setup for fast-starting trials

We deliver validated, ready-to-run clinical environments at short notice, enabling faster site activation, minimal disruption to hospital estates and immediate operational readiness.

Participant-centred design

Facilities are designed around comfort, privacy and dignity, supporting screening, consent, diagnostics, sample collection and short-stay procedures in a professional, reassuring setting.

Bringing research into communities

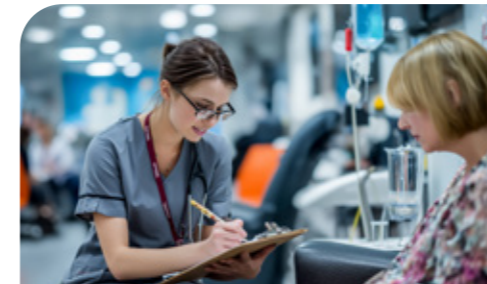

Mobile and modular units allow research teams to reach underserved or remote populations, improving recruitment, reducing participant travel burden and strengthening community engagement.

Seamless integration with hospital workflows

Our facilities align with infection-control standards, clinical governance frameworks, IT and data security requirements, and estate access and utility constraints, ensuring smooth on-site operation.

Ready for multi-site and multi-phase trials

Relocatable and repeatable units enable trials to move between locations while maintaining identical layouts, consistent sample handling and stable environmental conditions.

Flexible facilities for trials wherever they take place

Clinical research requires adaptable infrastructure that supports participant interaction, diagnostics, sample handling and short-stay clinical activity. Our modular portfolio enables rapid deployment, replication across sites and minimal operational disruption.

Contained solutions

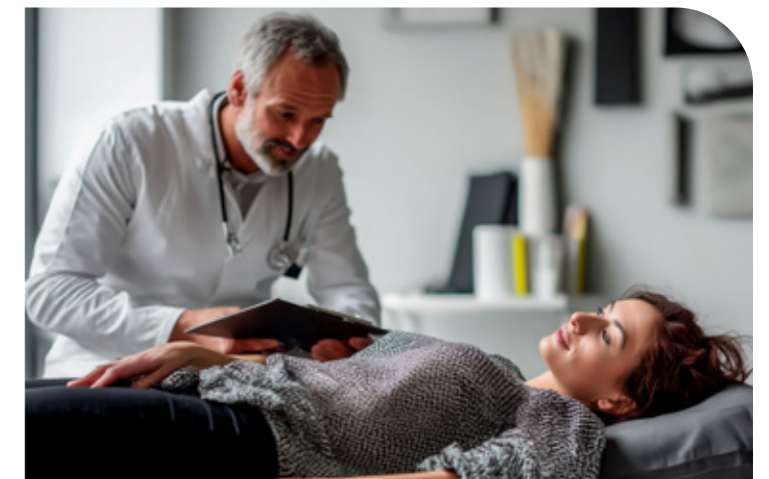

Compact, validated cleanrooms provide ready-to-use controlled environments for sample handling, cold-chain preparation, high-control diagnostics and study-specific requirements. These units offer the fastest mobilisation with minimal estate demands and high levels of environmental control.

Mobile and demountable facilities

Participant-ready clinical spaces designed for hospitals and community locations. Ideal for decentralised trials, screening, consent, diagnostic sampling and outreach programmes, these fully serviced facilities prioritise privacy, accessibility and comfort, and can be redeployed across multiple sites.

Modular MMC facilities

For long-term studies or expanding clinical research centres, modular modern methods of construction facilities deliver high-specification, integrated environments that reduce pressure on hospital estates. Ideal for dedicated research units, centralised hubs and biospecimen processing, they are designed for efficient long-term clinical use.

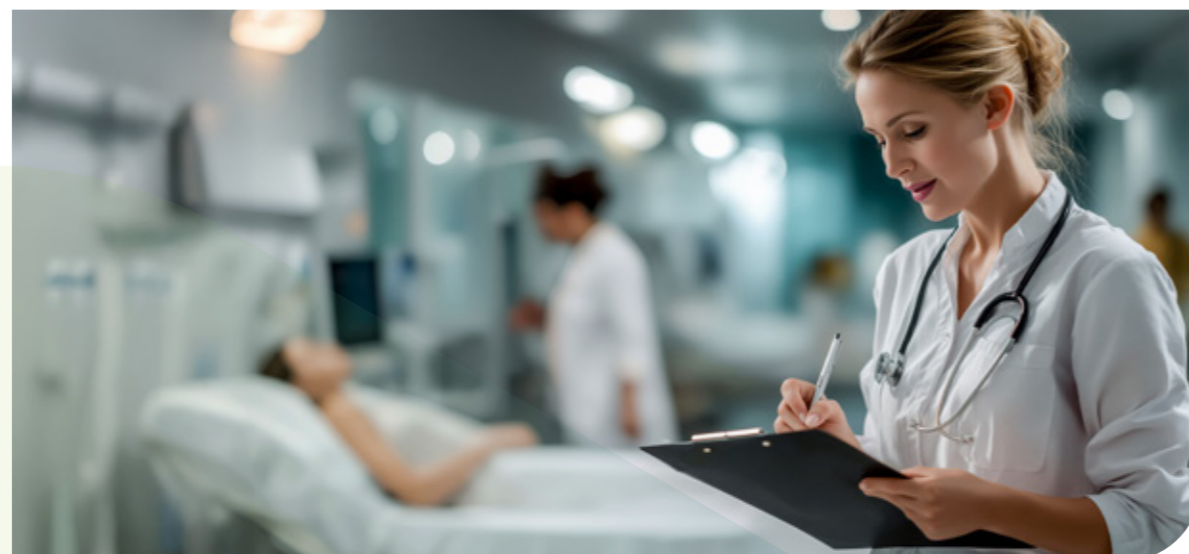

Clinical research made accessible

Vanguard Life Sciences provides flexible, deployable clinical research environments that improve participant access, accelerate site activation and simplify trial delivery. From community-based research to hospital-linked studies, our facilities help research teams deliver trials confidently, wherever they are needed.

Vanguard Life Sciences delivers mobile and modular clinical research facilities that integrate smoothly into hospital estates and community settings.
