

Contract Research Organisations (CROs)
Repeatable, relocatable, ready to run

Vanguard 
Life Sciences

Modular research environments engineered for agility and consistency

For Contract Research Organisations, infrastructure must move as quickly as the studies you deliver. With shifting protocols, compressed timelines, and research programmes often spanning multiple locations, you need controlled environments that can be deployed fast, replicated precisely, and adapted without compromising data integrity or compliance.

Vanguard Life Sciences provides modular research facilities that enable CROs to mobilise rapidly, standardise conditions across sites, and maintain compliance from day one. From early-phase research and diagnostics to sample handling and decentralised trial support, our solutions ensure your infrastructure keeps pace with sponsor expectations and study demands.

Deploy fast. Fit consistently. Deliver with confidence.

Mobile and modular cleanrooms designed to move at the speed of research on data generation, validation, and growth.

Consistency and agility, wherever the research takes you

CRO success depends on predictable, compliant environments that can be mobilised and repeated across locations. Sponsors expect consistency, regulators require traceability, and participants expect professionalism. Vanguard supports all three through infrastructure that is ready to run, easy to relocate, and designed for efficient study delivery.

Why CROs choose Vanguard Life Sciences

Repeatable, standardised environments

Identical layouts, environmental controls, and workflows ensure consistent conditions across study sites, strengthening data integrity and sponsor confidence.

Rapid deployment for fast-tracked studies

We deliver validated, ready-to-use research environments at short notice, supporting accelerated mobilisation, faster study starts, and minimal local setup.

Relocatable infrastructure

As trials shift or expand, our facilities can be moved between sites, reinstalled quickly, and reconfigured to suit changing study requirements.

Fully supported, fully compliant

Every facility includes validation documentation, controlled environmental systems, and traceable commissioning data, providing immediate audit readiness.

Sponsor-ready professional environments

Clean, controlled interiors, privacy zones, and process-driven layouts enhance participant experience and reinforce sponsor confidence.

Modular solutions matched to the pace of contract research

Our portfolio provides the flexibility CROs need for short-term, study-specific, or long-term research programmes, while maintaining consistent standards across locations.

Contained solutions

Compact, factory-built cleanrooms deliver immediate controlled space for early-phase work, high-containment processes, QC, or sample handling. These solutions offer the fastest deployment, predictable setup, and easy relocation between studies.

Mobile and demountable facilities

Designed for maximum mobility, these facilities support on-site trials, community-based screening, decentralised research, and multi-location programmes. Fully fitted and serviced on arrival, they enable efficient clinical workflows and improved participant accessibility.

Modular MMC facilities

For long-term or high-volume research, modular modern methods of construction facilities provide stable, high-quality environments integrated with existing campuses. Ideal for permanent laboratories, centralised study support, and high-throughput testing, they deliver durability and consistency over extended use.

RESEARCH ENVIRONMENTS YOU CAN RELY ON

Vanguard Life Sciences helps CROs mobilise faster, deliver consistently, and reduce operational complexity across every study location. With repeatable layouts, rapid deployment, and relocation-ready facilities, we support high-quality research wherever it needs to happen.

Speak to our Life Sciences team

Let's explore how we can help you deliver faster, more consistent and more efficient studies, anywhere your research takes you.
